

Instructions for DNS Setup

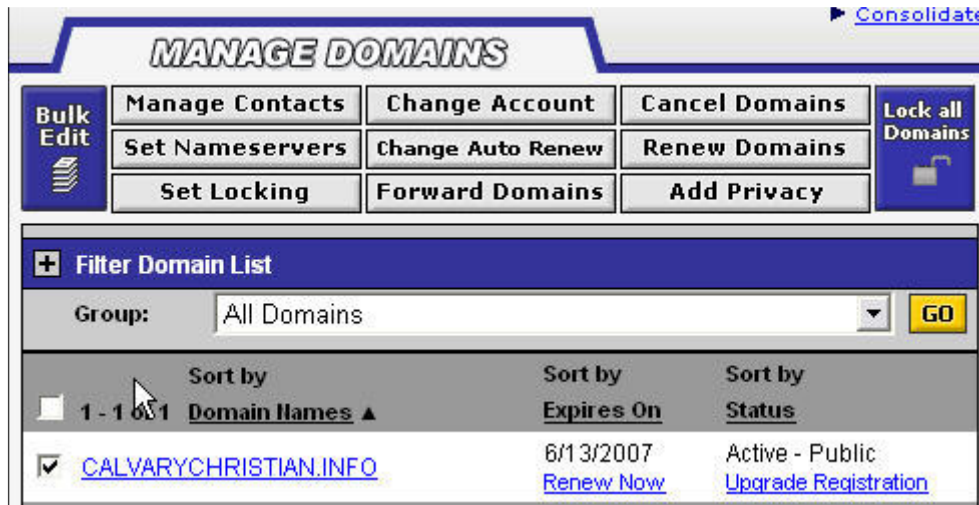

If you want to make it to where if someone types in yourdomain.com they will find your new AG Churches website, you need to do the following.

First you must login to your GoDaddy account.

Then click on the My Account link.

Then you click on the "Manage Domains" link in the menu.

First thing you do is check the box next to your Domain Name. Then click the Forward Domain button in the middle of your screen. **(Pictured Below)**

The right hand side will change and there will be a box for you to enter a forwarding address into. Please type this in that box. <http://??????.agchurches.org>. You will need to substitute your website number for the question marks.

Then below that you will want to check the box that says Mask Domain. Then in that box enter either your domain name or your Church Name.

Then go to the bottom of the page and click "Save Changes."

You will then need to do the following in your Website Administration Module to associate that domain with your AG Churches website.

Login in to your "Website Administrator Module" (WAM).

Click on the "Site Administration" button.

Click the "DNS" icon.

Enter your domain(s) in the box provided and click the "Add" button.

You will then see that domain name listed in the Current Domains section. You can point up to 10 domains to this account. Your website can now be located from that particular domain name. You may add up to 10 domain names through this process.
